

Slideshow Playbook v2 — Path-Aware Addendum

This addendum sits alongside the original playbook PDF. The 14-day calendar, caption templates, tracking rules, and ship checklist all still apply. What's new: **three slideshow modes** (generic, path-audience, path-gap) and the engine knows about all 10 Kiro paths.

Files this updates: use `kiro_slideshow_engine_v2.html` instead of v1, and `kiro_slideshow_claude_prompt_v2.md` instead of v1. The engine is fully backwards-compatible — your existing JSON still works.

1. The three modes (and when to use each)

Mode	What it is	When it pulls best	CTA destination
generic	Standard "7 prompts" slideshow (Shape A-prime)	Top of funnel. Broad audiences. Daily App Store posts	Search for "Kiro AI"
path-audience (Shape B)	Role-targeted prompts ("7 prompts Midjourney marketers should see") pulled by specific path's tag with [Path Name]	Mid-funnel. High-shield audience	Specific path's tag with [Path Name]
path-gap (Shape A-prime)	Knowledge-gap questions designed to expose high-shield audience to use something	Mid-funnel. High-shield audience	Specific path: "start with [Path Name]"

Path-gap is the highest-leverage format you have. Questions that make the viewer feel exposed convert better than prompts that give value away. Don't over-use it — it works because it's not the default.

2. The 10 paths (paste pathKey into JSON)

pathKey	Path Name	Audience
ai-foundations	AI Foundations	AI beginners
prompt-engineering	Prompt Engineering	anyone using ChatGPT
ai-tools	AI Tools	AI tool curious
ai-automation	AI Automation	people drowning in repetitive work
ai-agents	AI Agents	AI-curious power users
ai-for-business	AI for Business	founders and operators
ai-for-marketing	AI for Marketing	marketers
ai-for-finance	AI for Finance	finance pros and analysts
ai-for-managers	AI for Managers	team leads and managers
ai-for-healthcare	AI for Healthcare	clinicians and healthcare workers

3. Updated 7-day rotation (mix all three modes)

Replaces the v1 calendar. Cycle through the 10 paths so each one gets a slideshow every ~3 weeks.

Day	Mode	Path (rotate weekly)	Why this slot
Mon	generic	—	Broad reach, top of week
Tue	path-audience	ai-for-marketing → next path	Mid-week niche pull
Wed	generic	—	Volume
Thu	path-gap	ai-for-managers → next path	Highest-intent format, mid-week ambition
Fri	path-audience	different path from Tue	Weekend lurking + niche
Sat	generic	—	Weekend reach
Sun	path-gap	different path from Thu	"I should know this" Sunday energy

Weekly path rotation suggestion: Week 1 — Marketing + Managers. Week 2 — Business + Finance. Week 3 — Foundations + Agents. Week 4 — Prompt Engineering + Healthcare. Week 5 — Automation + Tools. Then loop. After 5 weeks every path has been used in both path-audience and path-gap mode.

4. How to brief Claude/ChatGPT (3 examples)

Generic mode brief

Paste the v2 prompt into ChatGPT. At the bottom:

```
MODE: generic
PATH: (leave blank)
ANGLE: 7 ChatGPT prompts every AI beginner should save
TOPIC: working professionals 25-45 who have used ChatGPT a few times
```

Path-audience mode brief

```
MODE: path-audience
PATH: ai-for-marketing
ANGLE: 7 ChatGPT prompts every marketer should save
TOPIC: B2B SaaS marketers tired of writing the same LinkedIn posts
```

Path-gap mode brief (the highest-leverage format)

```
MODE: path-gap
PATH: ai-for-managers
ANGLE: 7 AI questions every manager should be able to answer
TOPIC: middle managers at 50-500 person companies pretending to understand AI in meetings
```

The path-gap brief is the highest-leverage one to nail. The TOPIC field matters more here than in other modes — be very specific about which middle manager. "Engineering managers at post-Series-B startups" and "customer success managers at mid-market SaaS" produce different (better) questions than "middle managers."

5. New caption templates for path modes

The original v1 caption templates still work for generic mode. These are new for path modes:

Mode + path	Caption template
path-audience for any role	[role]: stop using ChatGPT like Google. these 7 prompts are the difference. tag a [role] who needs this
path-gap for any role	if you got more than 4 of these wrong, you have homework. (the answers are in the comments — and
path-gap follow-up first comment	if you got more than 4 of these wrong, the AI for [path] path on Kiro covers all of it. free to try.

6. The engine workflow (unchanged from v1)

1. Get JSON from Claude/ChatGPT.
2. Open `kiro_slideshow_engine_v2.html` in Chrome.
3. Paste JSON into the panel on the right.
4. Click **Render Slides**. Validation runs automatically.
5. If you used a path mode and the JSON includes `pathContext`, the CTA automatically renders "→ start with [Path Name]." No extra config needed.
6. Click **Download all 9 slides**.
7. AirDrop to phone, post to TikTok with the matching caption template.

Validator catches: missing fields, wrong number of prompts, unknown pathKey (tells you which paths are valid), smart quotes, code-fence wrapping. Cleaner errors than v1.

7. New thing to track: which mode converts

Every Sunday, log this for the past week's posts:

Mode	Posts this week	Total saves	Total shares	App Store search ticks
generic	—	—	—	—
path-audience	—	—	—	—
path-gap	—	—	—	—

*After 3-4 weeks, the mode with the best **App Store search ticks per save** ratio wins more slots in the rotation. Don't optimize on saves alone — saves are vanity if they don't lead to searches.*

Standing reminder: the engine is now over-engineered relative to your posting volume. You've shipped zero slideshows. The biggest gain available right now is posting one tonight, not improving the engine further. v2 is the last build until you have at least 5 posts of data.
